OTHER TECH NOTES
Inspected 4.4L Jaguar V8 cooling system, including thermostat housing, radiator, and coolant crossover components, for leaks or seepage – no issues noted.
Verified electronic air suspension (EAS) operates properly through all ride heights with no air leaks, suspension faults, or abnormal compressor operation.
Checked front suspension components, including lower control arm bushings and ball joints, for wear or excessive play – no abnormalities observed after control arm replacement.
Verified Terrain Response system and 4WD functions operate properly with no warning messages present.
